Programme Design Principles & Learning Outcomes

Welcome to The Living Classrooms in Mandai where students can experience multi-disciplinary authentic learning opportunities. Rooted in the 21st Century Competencies Framework, our programmes are designed to elicit relevant learning outcomes, and hone life skills while connecting students with nature and wildlife.

Each programme is built around experiential learning – encouraging curiosity, collaboration, and reflection. Through themes like Career Exploration, Design Thinking, and Eco-stewardship, students engage in hands-on activities that build critical thinking, communication, and teamwork.

In turn, every experience is crafted to inspire meaningful connections with the environment and empower students to become active contributors to a sustainable future.

Our programme design principles are rooted in MOE's 21st Century Competencies Framework.
